Brighton rally at 7a the armada in a Ren

Steve Webb of Tukshop.com saw his first one on holiday in India in 2002 and has since imported 300 of the tiny passenger vehicles to the UK. He's now on a mission to electrify the vehicles with the help of Oxford-based Saietta, leaders in axial-flux motor technology. His electric tuk-tuk has a range of 80 miles, and he's about to start operating a fleet of them as taxis in Newquay.

Saietta: I know that name. A few vehicles further up the line, I spot a gentleman standing in bare feet and tinkering with an enclosed motorcycle. It's Cedric Lynch, inventor of the Lynch Motor, precursor of the Agni Motor that's now manufactured by Saietta and which powers Webb's tuk-tuks.
